

## Invitae clinical collaborations

Together we can improve healthcare by bringing genetic testing into mainstream medicine.

Invitae is committed to driving forward research and genomic health programs that strive to improve healthcare through high-quality, affordable genetic testing.

### Our partnerships include:

#### Research collaborations

- Genetic testing has the power to transform healthcare, but it’s under-utilized when it comes to patient management. Our research collaborations often highlight the need for genetic testing to be offered to more individuals. These studies have been essential in driving changes in the paradigm for genetic testing.

#### Genomic health programs

- Large-scale population and precision health programs have demonstrated the impact of increased access to genetic testing. With the goal of improving healthcare and preventive medicine, the implementation of these programs has the ability to affect an unlimited number of individuals.

#### We have extensive experience with implementing genetic testing programs with partners including:

- Academic institutions
- Health systems
- Commercial organizations

### Our commitment includes:

**COMPREHENSIVE CLINICAL-QUALITY TESTING**

Comprehensive next-generation sequencing (NGS) testing performed in our CLIA/CAP-certified labs enables diagnoses, informed family planning, and proactive medical decision-making

**ACCESS TO GENETIC COUNSELORS**

Invitae's genetic counselors are available by phone to answer questions from both healthcare providers and patients

**COMMUNITY ENGAGEMENT**

Our physician and patient web portals mean easy access testing and continued engagement within the Invitae network

**PROVIDER AND PATIENT RECRUITMENT**

Workflows, education, training, and events enable your patients to seamlessly pursue genetic testing

**DATA COLLECTION AND SYNTHESIS**

We work together to draw widely applicable conclusions from the study and to publish those conclusions in peer-reviewed journals

Invitae has conducted extensive research into the area of genetic testing and healthcare.
